Supercritical fluid extraction (SFE) is the process of separating one component (the extractant) from another (the matrix) using supercritical fluids as the extracting solvent.Extraction is usually from a solid matrix, but can also be from liquids.SFE can be used as a sample preparation step for analytical purposes, or on a larger scale to either strip unwanted material from a product (e.g ...

Supercritical fluid extraction - Wikipedia

Supercritical fluid extraction is one of the most extensively studied and most widely used techniques for the separation and pre-concentration of elements [67-69]. The technique has become more useful in recent years due to the development of selective chelating agents [70-73] for trace metal determination.
