Stress can cause headaches, but the pain from the headaches can also make your stress worsen. Because the body and the mind work in concert, traumatic stress can cause a cycle that makes it seem like the body and mind are working against one another, worsening symptoms like pain and fatigue. Coping with Traumatic Stress

sixth leading cause of death. One in three US seniors will die with Alzheimer's or other forms of dementia.

12 Traumatic Effects of Stress on Your Brain | Be Brain Fit

So toxic stress, again, is the repeated activation of the stress response system without sufficient supports. Now, trauma is something that occurs when a child is exposed to an event or a situation that overwhelms their ability to cope with what they have experienced. And trauma is very individual to a child.

Examining the Effects of Toxic Stress and Trauma on the ...

Stress in an environment can impair the development of the brain and nervous system. An absence of mental stimulation in neglectful environments may limit the brain from developing to its full potential. Children with complex trauma histories may develop chronic or recurrent physical complaints, such as headaches or stomachaches.

Traumatic Stress: The Effects of Overwhelming Experience ...

Childhood trauma is an event experienced by a child that threatens their life or bodily integrity. Physical or sexual abuse, for example, can be clearly traumatic for children. One-time events like a car accident, natural disaster (like a hurricane), or medical trauma can take a psychological toll on children as well. 1
